# BluePeak ADVISORS

What are your audit universes telling you?

Developing and maintaining accurate audit universes does not have to be costly and resource intensive. BluePeak's proprietary analytics can save you time and money on universe reviews.

UMS
UNIVERSE MONITORING SERVICE

It is our consultants' collective experience and our analytics tools that makes BluePeak so well-positioned to quickly read a universe with thousands of lines of data and identify the specific cases that point to a potential compliance issue and require some investigation, EVEN when there are only a handful of such cases. BluePeak knows how to find the needle in a haystack!

BluePeak developed Universe Monitoring Service (UMS) as an audit readiness resource for Plans. It is also an excellent tool for identifying underlying operational issues. BluePeak's UMS can help Plans and PBMs in all stages of universe development and maintenance including:

➤ **Ensuring internal data mapping accuracy (including year over year changes)**

➤ **Calculating timeliness**

➤ **Identifying and correcting technical issues such as formatting, blank fields, inaccurate data population**

➤ **Pinpointing potential cases of non-compliance**

➤ **Improving First-tier, downstream and related entity (FDR) oversight through delegate universe review**

➤ **Reducing risk and isolating outliers**

BluePeak's UMS combines our intensive knowledge of CMS universe expectations with a proprietary analytics system to identify issue in universes. Issues, that left undetected, have a way of surfacing in CMS Program Audits.

3 The number of chances to submit accurate universes before CMS issues an Invalid Data Submission (IDS) condition.

BluePeak has reviewed over
15,000 UNIVERSES

BluePeak has participated in
400+ CMS MOCK AND PROGRAM AUDITS

Contact us today and see what your universes are trying to tell you.
